- 3 x #6-32 x 7/16" Black Oxide Finish Button Socket Cap Screws (1 extra screw included)*
- 1 x Crush Washer*
- 1 x Blue Loctite® 243 package*

Description:

The Light Muzzle Brake (LMB) and Front Sight Base (FSB) from M14.ca offers the M14 shooter a short, light, effective muzzle brake and front sight base that is compatible with any barrel with a .30 Calibre bore or less that has been cut, crowned and threaded 1/2"x28 TPI.

The LMB effectively reduces muzzle climb and recoil for quicker, more controllable, semi-rapid fire and maintains an optimized swing weight for fast rifle handling and short profile at the muzzle for use in tight spaces.

The M14.ca LMB also offers a stronger muzzle device to barrel connection than the original M14 muzzle device it replaces and affords the ability to conveniently switch out future muzzle devices with simple tools.

The M14.ca LMB and FSB set offers secure, effective muzzle control and a solid platform for a self-illuminating front sight, or otherwise.
